

# Line Filter Cartridges 'Standard'

## The Line Filter Cartridges 'Standard' range for optimal filtration

Thanks to our proven filter technology, you will achieve the best air quality with considerable energy savings.

Atlas Copco's innovative line filter cartridges are engineered to cost effectively provide the best quality air and meet today's increasing quality demands. The DD/DDp, PD/PDp and QD filters efficiently reduce contaminations of oil and dust with minimal pressure drop, resulting in reduced energy consumption.

This performance (good filtration with minimum pressure drop) can only be achieved by using Original Atlas Copco Line Filter Cartridges.

## Characteristics

The Line Filter Cartridges have different colors for the different filtration grades:

- Black bottom cap for DD, DDp and QD
- Light blue bottom cap for PD and PDp

## Improved Lifetime

To guarantee the required air quality level at the same low energy cost, an annual cartridge change (or 4 000 hours, whichever comes first) is essential.

Cartridges with activated carbon (QD) should be replaced yearly or every 1 000 hours.

DD with black cap

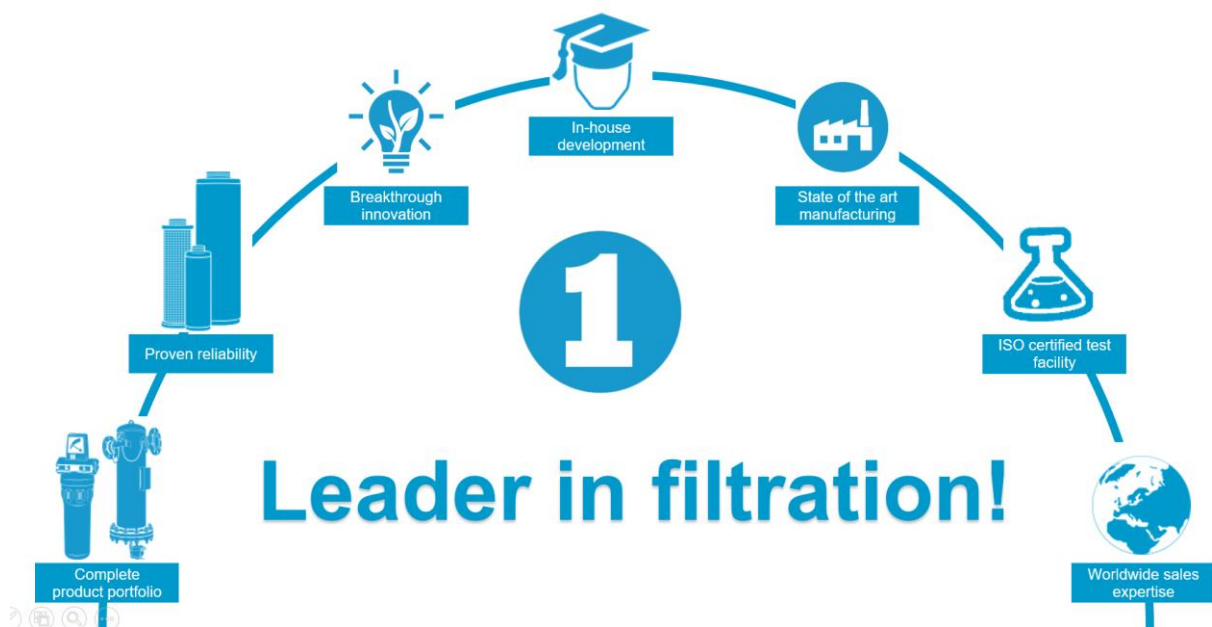

PD with blue cap

QD with black cap

## Atlas Copco Leader in Filtration

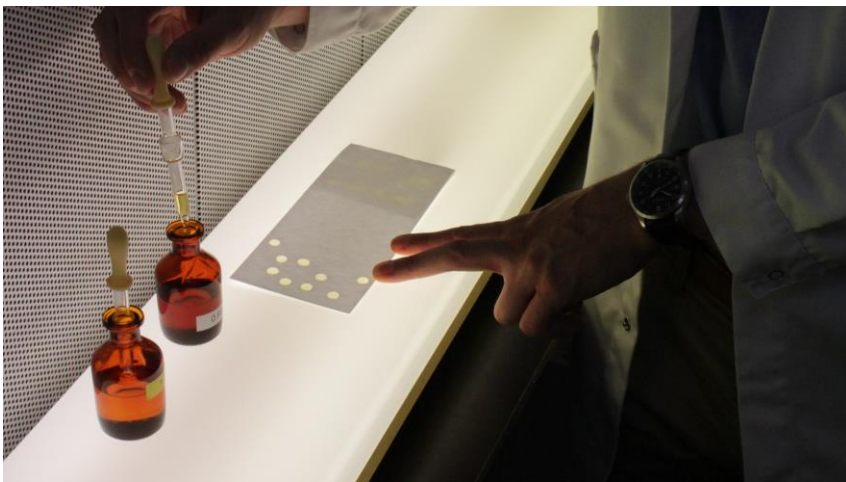

Atlas Copco's innovative line filter technology is 100% Atlas Copco development.

From A to Z, this technology is processed in-house, where every step in the product cycle is taken with the highest care and dedication, thanks to:

- A top class R&D center with highly skilled engineers constantly driving innovation
- A fully equipped research and ISO certified test facility where filter performance can be measured with the highest accuracy level
- A state of the art manufacturing process guaranteeing the highest product quality and 0-defects

This results in an ultimate filter performance, guaranteeing the best air quality at the lowest energy cost, making Atlas Copco a Leader in Filtration!

# Atlas Copco Genuine Parts Line Filter Cartridges 'Standard'

Features	Benefits
Top quality filtration media with large filter surface	The best filtration performance in the market
Synthetic foam	Drainage of oil droplets for the coalescing filter and dust filtration for the bigger particle
Push on element	Easy service, shorter down time
Unique design to work in harmony with the filter housing	Reduced pressure drop contributing to low running costs
Double O-rings	Proper sealing reduces leakage risks and as a consequence increases energy savings
Strong metal core	Prevents element implosion and corrosion
